

HSINSOU AWS-30

Suspending agent

HSINSOU AWS-30 acts as an suspending agent for use in the combined application of anionic and cationic dyes. Due to its good dispersing and retarding effect to premetallised and acid dyes, it prevent the precipitation of cationic dyes and anionic dyes in their one bath dyeing.

General properties:

Appearance	:	Colorless transparent liquid
Composition	:	Nonionic surfactant
Ionic nature	:	Nonionic
Solubility	:	Easy dissolve in cold water

Special feature:

1. Acts as antiprecipitant for one bath dyeing of A/W blends with cationic dyes and anionic dyes.
2. Will not impact the fastness of fabrics.
3. Will not change the shade of fabrics.
4. Gives the dyeing with moderate levelling and retarding effects.
5. Prevent the staining of wool from cationic dyes.
6. Gives fabrics with anti-static effect.

Application:

Amount of HSINSOU AWS-30 required would be depended on the depth and category dyestuff used.

Usage: 1.0-3.0% depending on the depth of shade.

Note: full evaluation is recommended prior to commercial usage.
