FA-750conc. Defoaming agent

FA-750conc. is a silicone defoaming agent with excellent emulsifying and dispersing stability. It is very effective for defoaming and preventing the formation of foam.

General properties:

Appearance	:	White emulsion liquid
Composition	:	Silicone compound
Ionic nature	:	Nonionic
pH (1% solution)	:	8.0 +/- 1.0
Solubility	:	Easy to dissolve in cold water

Special features:

1. Excellent emulsifying and dispersing stability.
2. More effective than mineral oil type.
3. Stable in acid, alkali and hardwater baths.
4. Effective in atmospheric temperatures and high temperatures dyeing.
5. Good resistant to spotting.

Application:

The amount of FA-750conc. required depends on many factors such as nature of treatment bath, type of machine used and temperature etc.

Generally, 0.05 ~ 0.1grams/liter would be adequate.

Note for handle :

- a : dilute FA-750conc. with cold water before putting into machines.
- b : do not apply FA-750conc. into machine when temp. is high in scouring or dyeing process.

Note: full evaluation is recommended prior to commercial usage.
