2259-10 Bulkying agent

2259-10 is a nonionic bulky agent, synthesized from emulsifying special fatty compound. It is suitable for all kinds of knitted and woven fabrics of wool, polyester, nylon, cotton and their blends. It causes no yellowing to the bulky & softening treated fabrics.

General properties:

Appearance	: White emulsion liquid
Composition	: Fatty acid ester compound
Ionic nature	: Nonionic
pH(1%)	: 4.0 + / - 1.0
Solubility	: Easy to dissolve in cold water

Special features:

1. Causes no yellowing to the bulky and softening treated fabrics.
2. Improves the raising efficiency and gives even raising effect.
3. Improves the fluency of raising and stretches, thus prevent the breaking-off.

4. Imparts bulkiness, softness, smoothness and full handle to the fibers.
5. Gives softening effect to the resin finishing, also improves the strength and reduces the abrasion.
6. Could be combined with glyoxal, urea formaldehydes, or melamine resins.
7. Very low influence to the fastness of the dyed fabrics after the bulky treatment.
8. Imparts antistatic effect.

Application:

Dosages depend on finishing and fabric constructions.

Normal dosage : 2 - 6 % (o.w.f) of 2259-10

Note : Full evaluation is recommended prior to commercial usage.
