NY-131

Levelling agent for acid dyestuffs

NY-131 is a dyestuffs affinity type levelling agent for acid dyes. It is suitable as a levelling agent for dyeing nylon and wool with acid dyes, and it gives the fabrics an even cooler yield.

General properties:

Appearance	:	Yellow brown liquid
Composition	:	Polyhydroxy alkyl amine compound
pH(1% solution)	:	9 +/- 1
Ionic nature	:	Nonionic
Solubility	:	Easy to dissolve in cold water

Special features :

1. Dyestuffs affinity type levelling agent.
2. Highly penetrating and wetting effect ion.
3. Give even reproducibility of dyeing.
4. Suitable for nylon dyeing and sulfonated dyes.

The amount of NY-131 required would depend on the fabrics and the Application :
depth of shades.

1. For light shade : 3% o.w.f.
2. For medium shade : 2% o.w.f.
3. For deep shade : 1% o.w.f.

note: full evaluation is recommended prior to commercial usage.
