PA-60 CONC Dispersing agent

PA-60 CONC is a special dispersing agent. It is very effective in dyeing process and is suitable for 100 % polyester of T/C blends.

General properties :

Appearance	:	Brownish liquid
Composition	:	Polynaphthalene sulfonate surfactants
Ionic nature	:	Anionic
pH (1% emulsion):		7.5 +/- 1.0

Special features :

1. Suitable for polyester, nylon, acetate and their blends.
2. A highly effective dispersing agent and prevents dye agglomeration and tarring.
3. Stable salt, acid, alkaline and hard water in the dyeing process.
4. Able to prevent irregular dyeing in circular system.

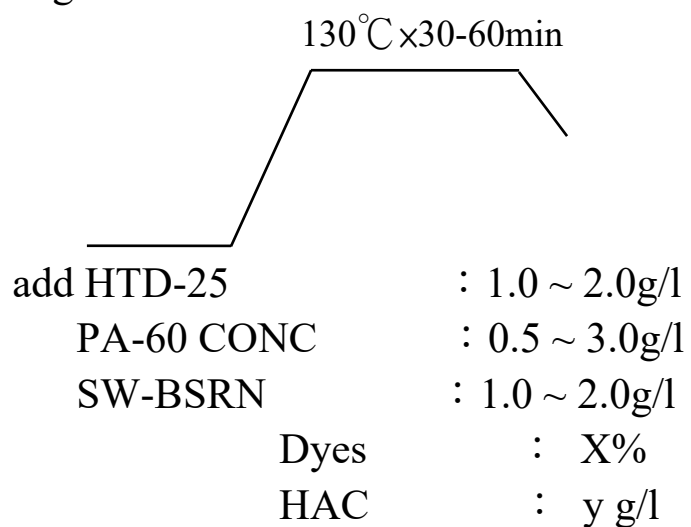

Application :

Recommended dosage :

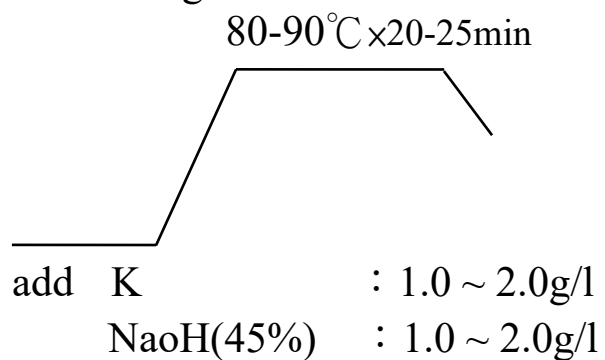

Light, medium	0.5~1.0 g/l
Dark or dyestuff with poor dispersibility	1.0~3.0 g/l

Process :

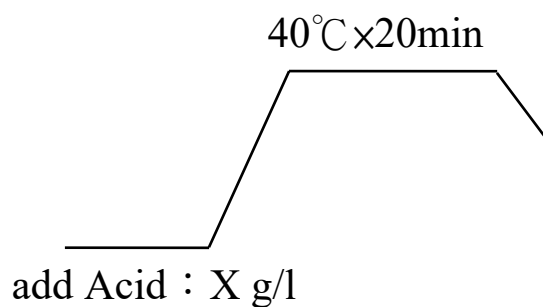

Dyeing

Reduction cleaning

Acid neutralization

Note: full evaluation is recommended prior to commercial usage.
